

ASK THE EXPERT

How Can I Create Custom Geo Maps in
SAS[®] Visual Analytics?

Greg Treiman

Senior Associate Technical Training Consultant, SAS

Greg Treiman

Senior Associate Technical Training Consultant

Greg is a Senior Associate Technical Training Consultant on the SAS Education team. He is responsible for developing and maintaining training related to SAS programming and data visualization.

Why should I care about custom geo maps?

What is SAS Visual Analytics?

Cloud Analytic
Services

Analyze massive
amounts of data

Import data

Explore data

Create reports

Share insights

What objects are available in SAS Visual Analytics?

Tables

Controls

Content

Geo Maps

Containers

Machine Learning

Graphs

Analytics

Statistics

How do you create a geo map?

Geography data item

How do I create a geography data item?

**Geographic name
or code lookup**

Country names
or codes

State or province
names or ID values

US state names
or abbreviations

US postal codes

**Latitude and
longitude in data**

Latitude

Longitude

**Geographic data
provider**

Geographic name or
code lookup

Possible regions

Geographic data
provider

What's a geographic data provider?

Latitude and longitude

Geographic data provider

Data source

Geographic locations or regions

Geographic name or code lookup

How does a geographic data provider work?

Data source

- CAS table
- Contains business data to be displayed on a map

Geographic data provider

- Contains information about how to plot polygons

What can I use to create a geographic data provider?

Esri feature services

- Hosted on ArcGIS Online
- Stored on your Esri server

SAS data sets

Shapefiles

- Common format for storing geospatial data

How do I create a geographic data provider using a shapefile?

What is a shapefile?

Point

Polyline

Polygon

Fewer points

- Smaller file size
- Less smooth curves

More points

- Larger file size
- Smoother curves

.shp file

shape format

.shx file

shape index

.dbf file

attribute data

.prj file

projection
information

What's needed?

Access to a SAS
programming interface

Permissions to define
geographic data providers

Shapefile data

How do I use a shapefile?

- Identify ID variable

- Convert shapefile to a SAS data set
- Add sequence variable

- Create geographic data provider

```
PROC MAPIMPORT OUT=map-data-set  
                DATAFILE='path-to-shapefile';  
  <SELECT field-identifier > ;  
  <EXCLUDE field-identifier>;  
  <RENAME 'field-identifier-1'=variable-name-1>;  
  <ID field-identifier> ;  
RUN;
```

Is there an easier way to import shapefiles?

`%SHPCNTNT`

- Displays contents of the shapefile
- Identify the ID column

`%SHPIMPRT`

- Imports the shapefile
- Adds the `_seq_` variable
- Loads the table to CAS

```
%SHPCNTNT(SHAPEFILEPATH=path-to-file)
```

The path must be accessible to the SAS server.

```
%SHPIMPRT(SHAPEFILEPATH=path-to-file,  
ID=id-column,  
OUTTABLE=table-name,  
CASHOST=machine-name,  
CASPORT=port-number,  
CASLIB=library-name,  
<REDUCE=0/1>);
```

View

Import

Define

GEOID	X	Y	segment	_seq_
01001	-86.413115	32.707386	1	1
01001	-86.412342	32.503636	1	2
01001	-86.411172	32.409937	1	3
01001	-86.425072	32.402436	1	4

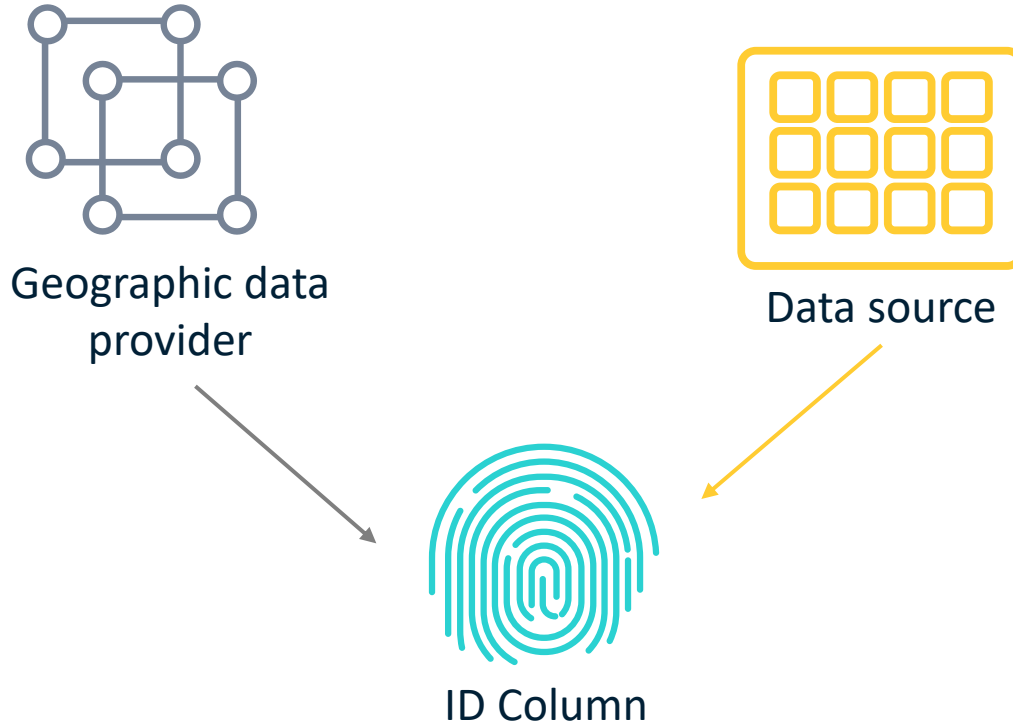

How do I define a geographic data provider?

Geographic data
provider

- Create a new geographic data provider
- Match ID columns in the shapefile and geography data item
- Specify a polygon, polyline, or coordinate

How do I match ID columns?

FIPS_Code	State
29051	MO
29027	MO
29019	MO

FIPS	County	Income
29051	Cole	\$34,228
29027	Callaway	\$30,266
29019	Boone	\$30,340

Demo: Creating a Geographic Data Provider from a Shapefile

This demonstration illustrates how to import a shapefile to CAS and create a new geographic data provider.

How do I create a geographic data provider using an Esri feature service?

What's an Esri feature service?

Esri feature service

- Created in ArcGIS
- Published to ArcGIS Online
- Hosted on an Esri server

Available layers

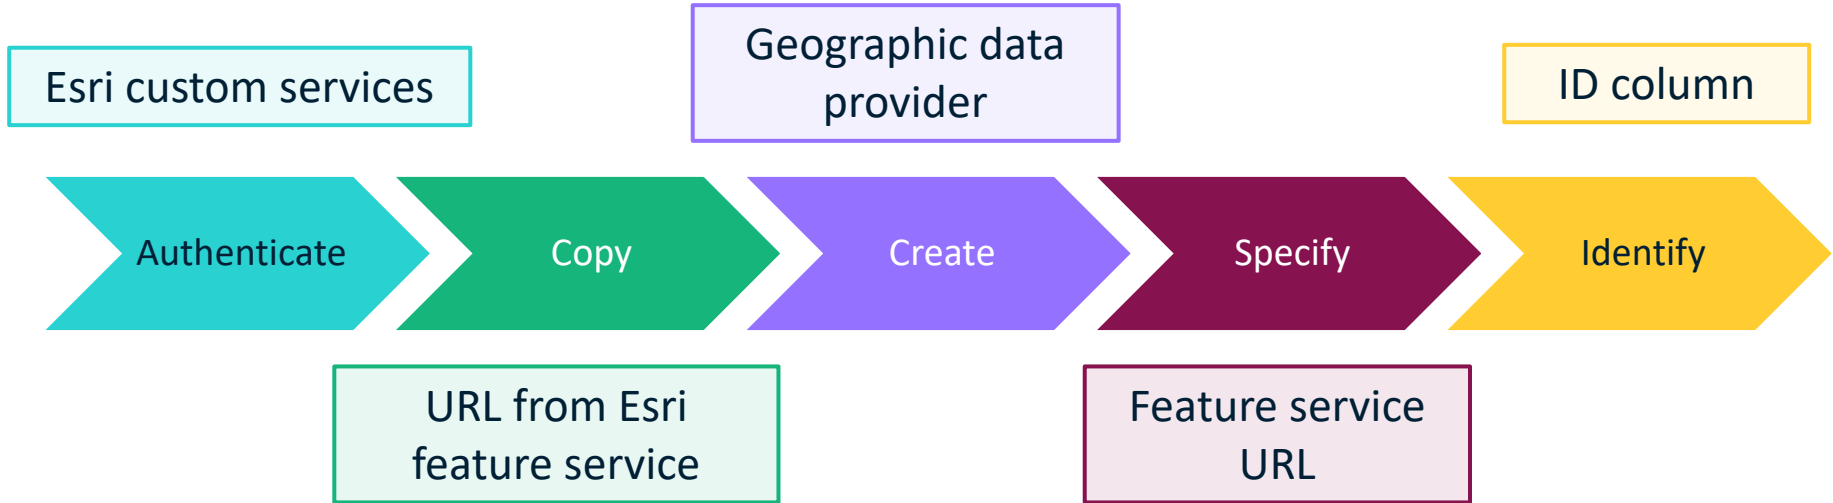

Cameron Department Boundaries

NOAA Coal Reef Watch

How do I use an Esri feature service?

Demo: Using an Esri Feature Service

This demonstration illustrates how to create a geographic data provider using an Esri feature service.
