

Network Analysis using SAS Visual Analytics

Falko Schulz

Distinguished Software Developer ▪ Business Intelligence
Visualization R&D

Agenda

- Introduction
- Network analysis and visualization
- Data preparation
- Exploring networks in SAS Visual Analytics
- Examples
- Q&A

Complex Systems

Synergy is the interaction of multiple elements in a system to produce an effect different from or greater than the sum of their individual effects.

Emergence is the way complex systems and patterns arise out of a multiplicity of relatively simple interactions.

“The whole is greater than the sum of its parts.”

-- Aristotle

Graph Theory

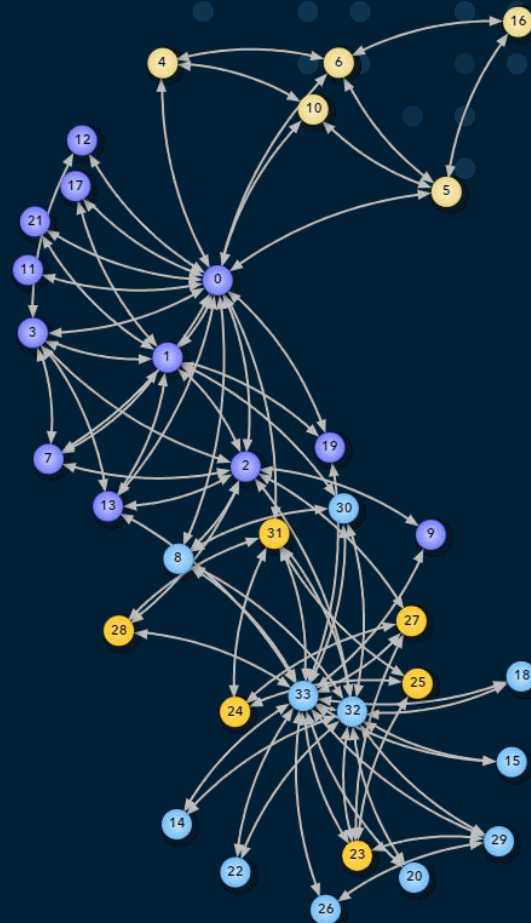

Bridges of Königsberg

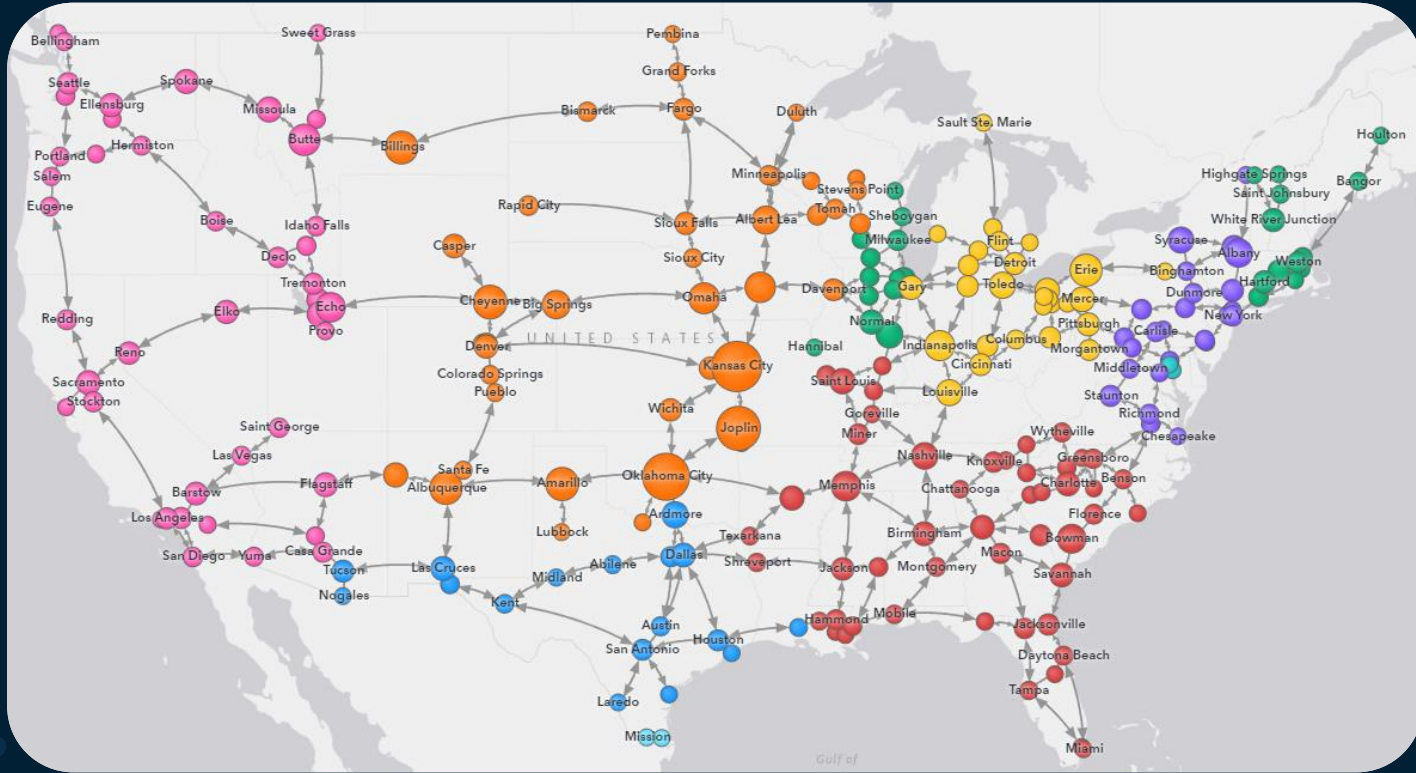

Network Visualization

- Nodes (*Vertices*)
 - Size, color
- Links (*Edges*)
 - Direction, width, color
- Layout
 - Dynamic (spring-force layout)
 - Mapped (geo overlay)

Network Layout

Network Layout

Decorate network data

- Centrality measures
 - *Betweenness*: the number of shortest paths a node is on.
 - likely path for information flows
 - *Eigenvector centrality*: the centrality of a node's neighbors.
 - popular among popular actors.
 - *Degree*: number of connections.
 - number of friends, followers, etc.
- Community detection
 - Clustering

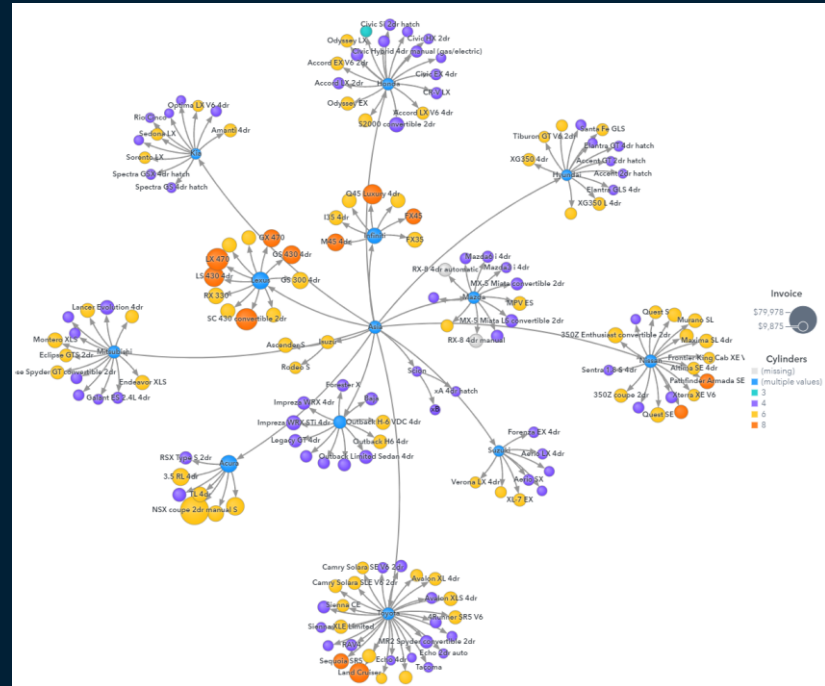

Data Preparation

- SAS Visual Analytics supports two types of input data sources
 - Hierarchical network structure
 - Ungrouped network structure

Hierarchical data structure

- Common data structure
- Creates a multi-level graph by using a hierarchy or a set of categories

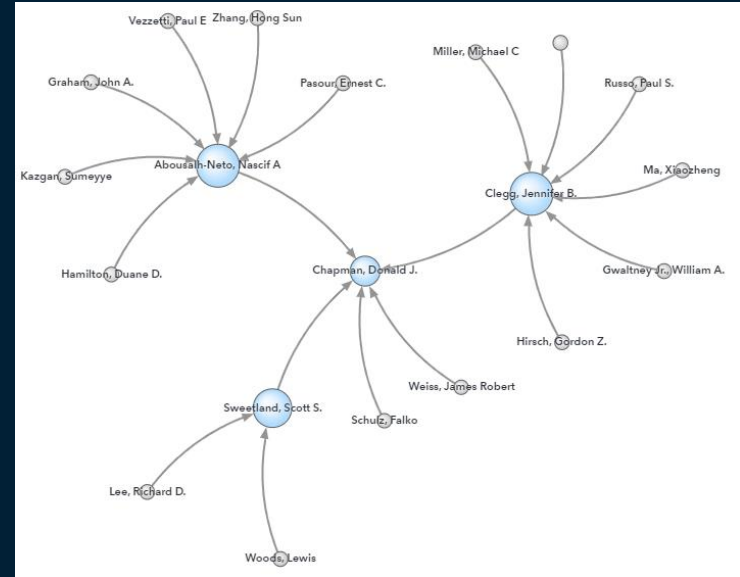

ORIGIN	MAKE	MODEL	CYLINDER S	INVOICE	MSRP	HORSEPOWER
Asia	Honda	Civic LX 4dr	4	\$14,531	\$15,850	115
Asia	Honda	Civic Si 2dr hatch	4	\$17,849	\$19,490	160
Asia	Toyota	Land Cruiser	8	\$47,986	\$54,765	325
USA	Ford	Escape XLS	6	\$20,907	\$22,515	201

Ungrouped data structure

- Used to represent traditional node-link data sets
- Requires one source (from) and one target (to) column

EMPLOYEE	MANAGER	SALARY	STARTDT
EMP1	MGR1	40000	17-Sep-02
EMP2	MGR2	67000	12-Mar-01
EMP3	MGR2	55000	04-Apr-04
MGR1	MGR2	85000	23-Jun-96
MGR2		98000	5-May-95

Sydney Public Transport

Sydney Trains Network (B)

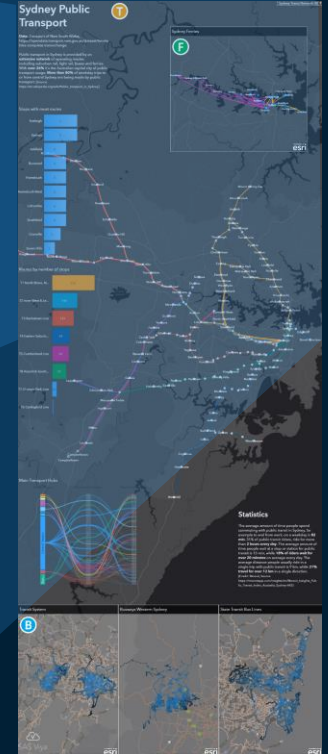

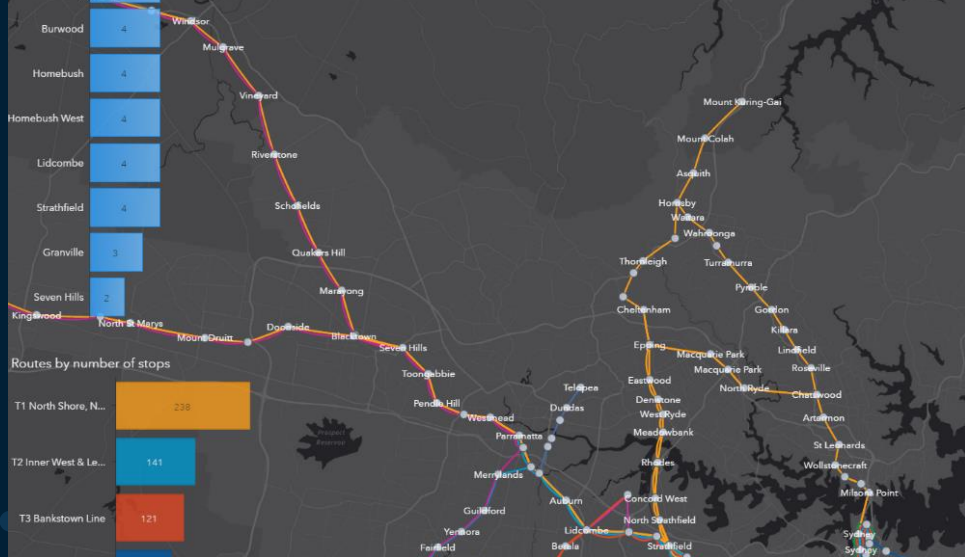

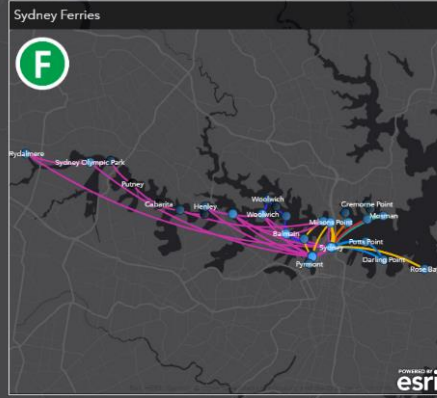

Data: Transport of New South Wales, <https://opendata.transport.nsw.gov.au/dataset/timotables-complete-transxchange>

Public transport in Sydney is provided by an extensive network of operating modes including suburban rail, light rail, buses and ferries. With over 26% it's the Australian capital city of public transport usage. More than 80% of weekday trips to or from central Sydney are being made by public transport. COVID-19 Scientific Literature Search and Text Analysis

Explore the interactive co-citation network

Select an authority group for the top 30 most populated communities, identified by the top three topics in that community, to see an associated network of co-citations. Zoom in on the top percentage of authoritative papers below. Each node in the network represents a paper or reference. The color of a node represents a paper's authority score. A higher value here means higher importance in the network based on a number of references from direct linked papers as well as their references.

Co-citation network for topic "Respiratory Exacerbation, Respiratory Tract Infection or Patient Care and Mortality"

Cited by	25.16%	Identification of a Novel Polyomavirus from Patients with Acute Respiratory Tract Infections	Anne Gaynor, Michael Nissen, David Whiley, Ian Mackay, Stephen Lambert, Guang Wu, Daniel Brennan, Gregory Storch, Theo Sloots, David Wang	2007-05-0

Double click on a paper topic shows more detailed information about the selected community. Double click on a paper searches the data base for related papers based on the papers title.
