

Introduction to Analytics Use Case Canvas

FANS DK Network Meeting, 2020-11-25

Erik Strömgren, Sr Technical Consultant, Analytics, SAS Nordics

Painting an Analytics Picture

- One-pager
- Capture all essentials
- Useful for
 - Brainstorming
 - Discussing
 - Assessing
 - Comparing
 - Selecting
- Shared understanding

Agenda

- What is a *Canvas*?
- What is an *Analytics Use Case*?
- Some Popular Canvases
- *SAS Analytics Use Case Canvas*
- Example: Orion Star – HR Report
- Q & A

Analytics Use Case

- “A specific situation in which analytics is used to convert a business problem into value”
 - Idea, proposal, intention, objective, initiative, plan
 - *Use Case* commonly used and understood in neighboring fields
 - AI Use Case, Machine Learning Use Case, Data Science Use Case, Big Data Use Case, etc.
 - More modern than Analytics *Business Case* (but similar meaning)
- Caution: “Use Case” means something very different in IT – “super-detailed requirement”

Quiz 1: Which of these templates/canvases do you have experience with? (multi-choice)

- Business Model Canvas
- Business Case
- Project Plan
- Requirement
- User Story
- Any SAFe template/canvas

Some Templates/Canvases for Analytics

Analytics Use Case Canvas

People

Technology

Value

Process

Users

The <users> doing something

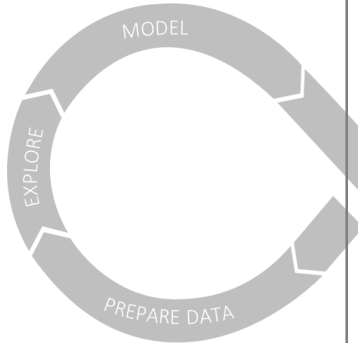

[3]

Stakeholders

[6]

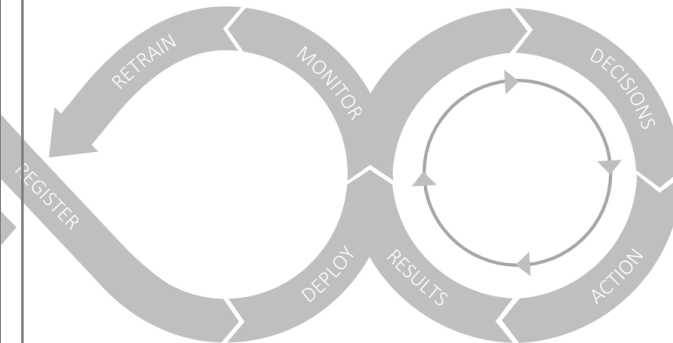

Discovery

[2]

Solution

[5]

Value Story

[1]

Currently <users> <do something> to get <this value> but <current solution, non-existing solution or competition> causes <problems>.

This <new solution> enables to <do something better> which increases <this value>.

Processes

How users currently <do something>

How users <do something better> with the <new solution>

[4]

Success Criteria

[7]

Quiz 2: In your experience, which are the most difficult parts in getting analytics to really make a difference? (multi-choice)

- Access to relevant and clean data
- Users don't trust or don't understand how to use the solution
- Stakeholders don't understand all integration challenges
- There's no value discussion
- The current process isn't clear, or unclear how "good" it's working
- Non-existing or unclear success criteria
- No-one has a complete overview of the solution
- Something else

SAS Analytics Use Case Canvas – Example

Orion Star – HR Report

Orion Star Sports & Outdoors

3,151 products

64 suppliers

Sales

68,300 customers

747,953 orders

Marketing

648 employees

Human Resources

Users**[3]**

<Senior HR business partners> reviewing salary distributions

Stakeholders**[6]**

Head of HR, reporting system owner,
privacy/compliance officer

Discovery**[2]**

Problem: **Lack of self-service access to information.**

Solution: Extend existing HR self-service report with a **new report page visualizing salary distributions by job title.** The new page is **available only for senior HR business partners.**

Solution**[5]**

The **<new report page>**:

Integrates with:

- Existing reporting system
- Existing HR self-service report
- Existing group access system

Is accessed within the existing HR self-service report, visible only for members of the appropriate user group.

Supports these decisions:

Are salary distributions reasonable and/or optimal? Are compensations fair and competitive? Within job titles and between job titles.

Enables these actions:

Realignment of compensations/salaries. Within job titles and between job titles.

Value Story**[1]**

Currently <senior HR business partners (3-5)> <review salary distributions (2-8 times/year)> to pursue <fair and competitive employee compensations> but <lack of self-service access to information> causes <time-consuming (2+ h) report requests each time, outdated data (at least 1-2 weeks old), and poor consistency between reviews>.

This <new report page>

enables <time-savings, more efficient and consistent reviews> which further improves <fairness and competitiveness>.

Feasibility: Reporting system already exists, HR self-service report already exists, requires only one, relatively small, new report page. Required employee salary data is already available for the existing HR report, only requires small transformations. Platform for restricting report page access already exists.

Processes**[4]**

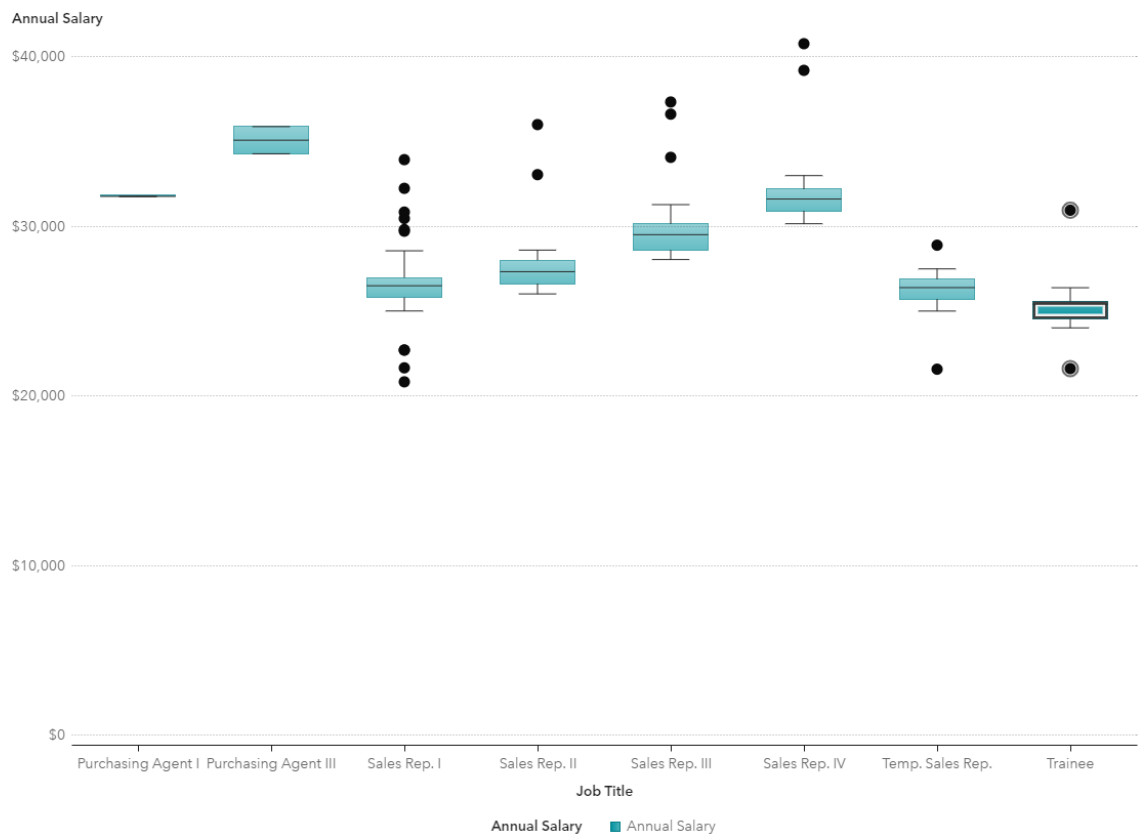

Currently a well-defined <process for reviewing salary distributions> exists but doesn't take advantage of self-service information access.

With the <new report page> the <process is significantly improved>.

Success Criteria**[7]**

MVP: Minimalistic new report page with box plot by job title.
Business KPI: 50% time-saving for reviewers.
Report KPI: Accessed at least 15 times/year by at least 3 users.

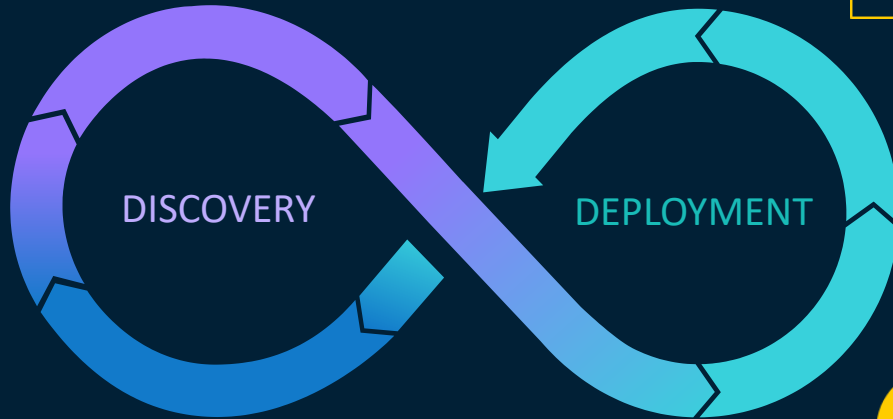

Annual Salary by Job Title

ID	Job Title	Company	Group	Employee Hire Date	Annual Salary
121129	Trainee	Orion USA	Trainees	2007/01/01	\$30,945
