# Automated Vehicle Odometer Reading Using SAS® for AI and Computer Vision

Tyler Rosacker, Angela Wu (State Farm)

Kedar Prabhudesai, Hardi Desai, Neela Vengateshwaran, Varunraj Valsaraj (SAS Institute Inc.)

# Agenda

- Research Goal
- Odometer Detection Model
- Digit Detection Model
- Combined Pipeline
- Potential Enhancements

# Research Goal

*Build a pipeline that can read a vehicle  
odometer based upon just the dashboard photo*

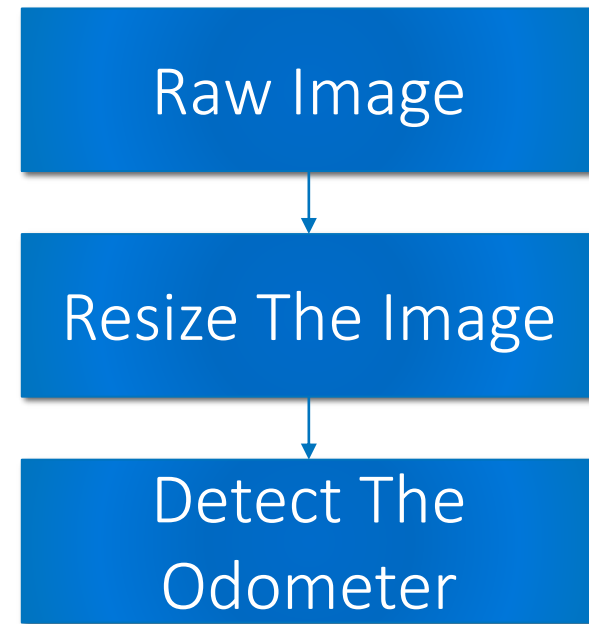

# Challenges

- Localizing Odometer region
  - Dashboards have a lot of digits on them other than odometers
- Size of Odometer region
  - Area covered is less than 0.01 % of total area
- Mechanical vs. Digital Odometer
- Digit Recognition
  - Different vehicles have different digits formats
  - Decimal is set differently in mechanical and digital odometer
  - Confusion in digits: (1,7), (3,8) and (0,8)

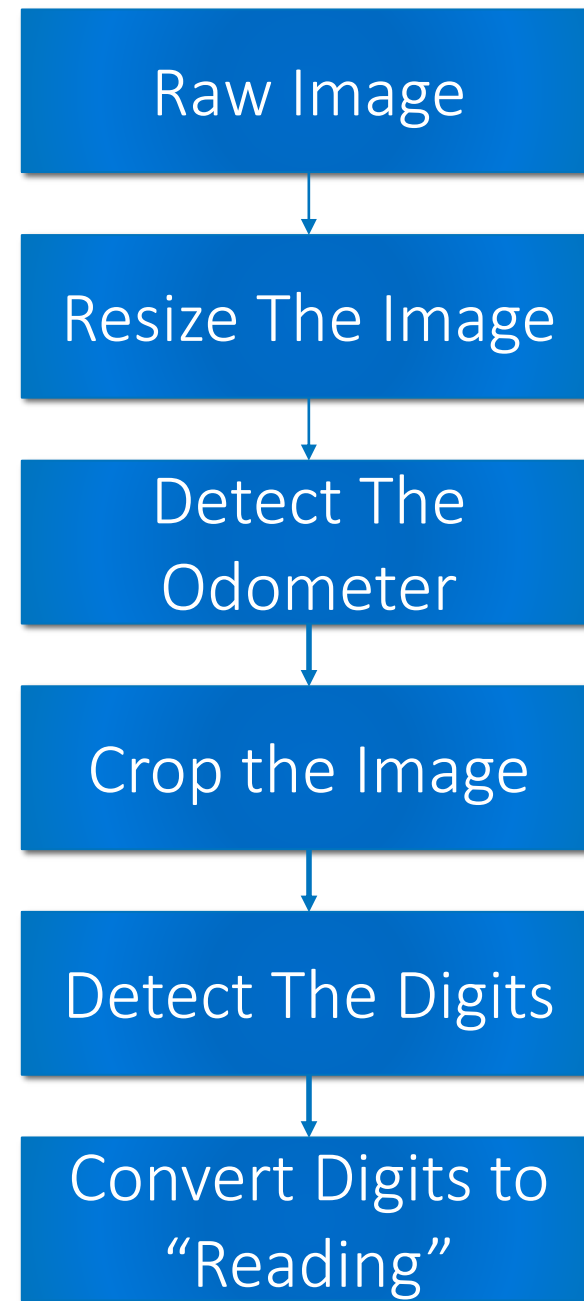

# General Pipeline

# General Pipeline

# Odometer Detection

## Task

- Spot the odometer
- Give a confidence on its detection

## Model Building

- Random grid search over 3-week period
- Total of ~2500 models built

## Champion Performance

- Percent of Odometers Detected: 88.3%
- False Positive Detections: 13.3%

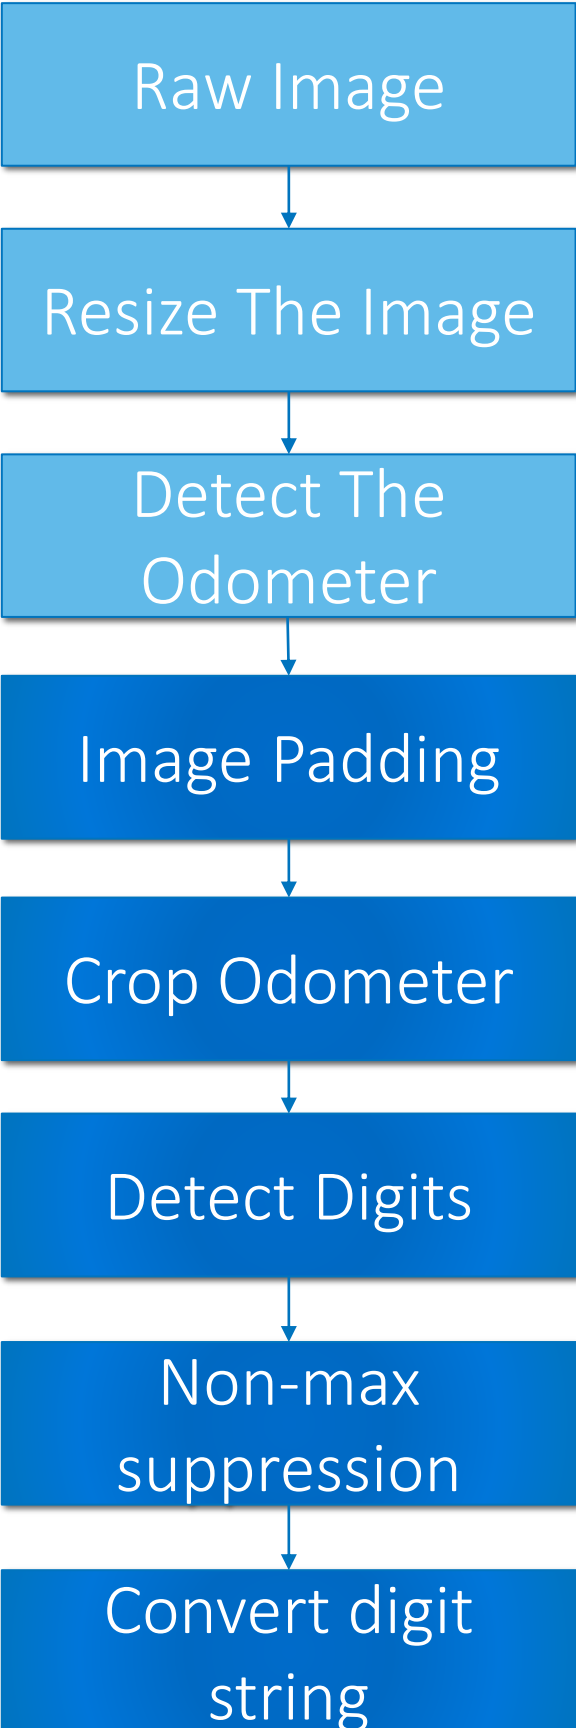

# Odometer Detection - Demo

# Odometer Detection - Demo

# General Pipeline

33,000 SVHN Images + 2,700 State Farm Images

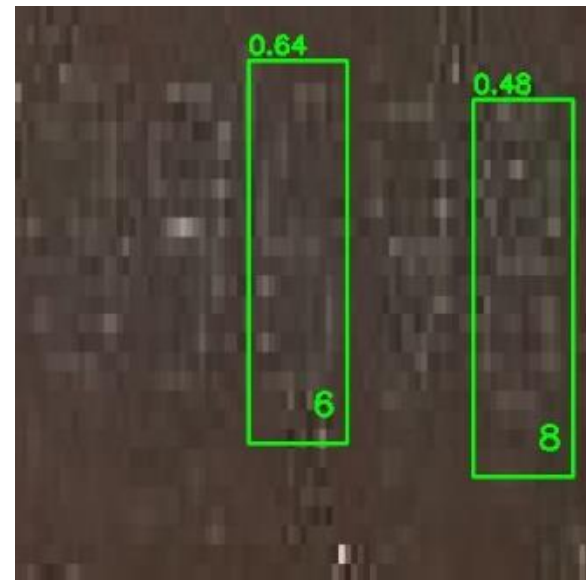

# Digit Detection - Demo

# Some bad performers

# Evaluation using Digit Error Rate (DER)

substitution

deletion

insertion

$$DER = \left[ \frac{N_{subs} + N_{dels} + N_{ins}}{N_{total}} \right] \times 100$$

# Combined Pipeline Results

## Evaluated on 989 holdout images

Histogram of DER

- 648 images (65.5%) had 0% DER
- 833 images (84.2%) had DER  $\leq$  40%
- 380 images (38.42%) had DER  $>$  40%
- Total DER for 5,492 digits = 17.53%

$$= \frac{N_{subs} (248) + N_{dels} (600) + N_{ins} (115)}{N_{total} (5,492)}$$

# Summary

- Our system automatically extracts odometer readings from vehicle dashboard images using **two deep learning models** – one to isolate the odometer and another to recognize digits
- The odometer detection model has an **accuracy of 88.3%** with a **false positive rate of 13.3%**
- The digit recognition model has an overall **digit error rate of 17.53%**
- Please refer to our paper for additional details about the methodology along with results

# Other Applications using Computer Vision

Case #1: Identification of Shared Ride Vehicles

Case #2: Identification of Reappearing Claims

Case #3: Identification of Previous Damage

Case #4: Identification of the Damaged Car Part
