\*Program 1 x SASHELP.FISH x

CODE LOG RESULTS OUTPUT DATA

```
1 /* Let's Copy Some Code */  
2  
3 proc sort data=sashelp.fish out=fishsort nodupkey;  
4   by Species;  
5 run;  
6
```

A screenshot of a Google Docs editor window. The title bar reads "Untitled document - Google Docs". The address bar shows the URL "docs.google.com/document/d/16wqmg9Th4pbkb7WtErcKvjgYSCn...". The document content area shows the following SAS code:

```
proc sort data=sashelp.fish out=fishsort nodupkey;  
  by Species;  
run;
```

The code is formatted with syntax highlighting: "proc" is blue, "sort" is blue, "data=" is black, "sashelp.fish" is blue, "out=" is black, "fishsort" is blue, "nodupkey;" is blue, "by" is blue, "Species;" is blue, and "run;" is blue. A purple arrow points from the copy icon in the SAS Studio toolbar to the copied code in the Google Docs editor.
