

- 1) Created an Information map named 'MBonusInformationMap' and provided the extended attribute at information map level.

Extended attribute: Subject_Default

Value: Subject_ID_MDN

- 2) Created a business context named MTS telecom and associated it with the information map created above i.e. MBonusInformationMap.
- 3) Validated the Information map successfully. Also, when we click on 'View Information Map Details' we are able to see the Subject_Default attribute as a property of Information map.

Issue: While saving this business context it gives an error saying “Missing Subject_Default extended attribute in the information map MBonusInformationMap”. Please find a snapshot of the same below:
