Metadata Description

CDISC01＿1
CDISC Test Study Modified to illustrate Define－XML 2.1 features
CDISC01－1
Study CDISC01＿1，Data Definitions V－1
Data Definitions for CDISC01－01 SDTM datasets．This metadata version contains only a subset of datasets comp version．The metadata provided is only intended to illustrate most Define－XML 2.1 new features and not meant tc comprehensive example of all metadata expected to be defined to fully describe an SDTM dataset package．Note Supplemental documents released in prior Define－XML versions were not updated to reflect changes to the metac example is prepared for a context other than submission；however，still using the approach of non－standard varia supplemental qualifiers datasets．

Standards for Study CDISCO1＿1

| Standard | Type | Status | Documentation |
| :--- | :--- | :--- | :--- |
| SDTMIG 3．1．2 | IG | Final | The CDISCO1 study was modeled on a very old SDTMIG and no attempt was done yet to upversion it to a newer |
| SDTMIG 3．2 | IG | Final | As an example，the CDISC01 study was adjusted to include a new Domain available in SDTM IG 3．2 |
| SDTMIG－MD 1．0 | IG | Final | As an example，the CDISC01 study was adjusted to include a new Domain available in SDTMIG－MD 1．0．The XS <br> expected to reference the device used with variable SPDEVID． |
| CDISC／NCI SDTM <br> 2011－12－09 | CT | Final | Assuming the CT was not upversioned for this study |
| CDISC／NCI SDTM <br> 2015－12－18 | CT | Final | The CT version applicable for the new Domain is the 2015－12－18 version |

Datasets

| Dataset | Description | Class | Structure | Purpose | Keys | Documentation |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| TS［SDTMIG 3．1．2］ | Trial Summary | TRIAL DESIGN | One record per trial summary parameter value | Tabulation | STUDYID， TSPARMCD， TSSEQ |  |
| DI［SDTMIG－MD 1．0］ | Device Identifiers | SPECIAL PURPOSE | One record per device identifier per device | Tabulation | STUDYID， SPDEVID， DIPARMCD | The DI domain is included to illustrate the use of a separate complementary SDTMIG．In this example，the device ID is referenced from a Findings Doma （XS）． |
| DM［SDTMIG 3．1．2］ | Demographics | SPECIAL PURPOSE | One record per subject | Tabulation | STUDYID， USUBJID | See Reviewer＇s Guide，Section 2. <br> Demographics <br> Reviewers Guide［section2．1 <br> （csdrg．pdf\＃section2．1）］ |
| EC［SDTMIG 3．2］ | Exposure as Collected | INTERVENTIONS | One record per constant dosing interval per subject | Tabulation | STUDYID， USUBJID， ECSTDTC， ECENDTC，ECTRT， ECDOSE |  |
| EX［SDTMIG 3．1．2］ | Exposure | INTERVENTIONS | One record per constant dosing interval per subject | Tabulation | STUDYID， USUBJID， EXSTDTC， EXENDTC，EXTRT， EXDOSE |  |
| LB［SDTMIG 3．1．2］ | Laboratory Tests Results | FINDINGS | One record per analyte per visit per subject | Tabulation | STUDYID， USUBJID，LBCAT， LBMETHOD， LBTESTCD， LBDTC， VISITNUM， LBNAM |  |
| VS［SDTMIG 3．1．2］ | Vital Signs | FINDINGS | One record per vital sign measurement per visit per subject | Tabulation | STUDYID， USUBJID， VSTESTCD， VSDTC， VISITNUM， VSPOS |  |
| XS［Non Standard］ | S Findings | FINDINGS | One record per finding per visit | Tabulation | STUDYID， USUBJID， |  |

|  |  |  |  | per subject <br> XSTESTCD， <br> XSDTC， <br> VISITNUM |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

Methods

| Method | Type | Description |
| :--- | :--- | :--- |
| Algorithm <br> to derive <br> AGE | Computation | Age at Screening Date（Screening Date－Birth date）． |
|  |  | For the complete algorithm see the referenced external document． |

|  |  | Complex Algorithms［DM＿（complexalgorithms．pdf\＃DM）］］ |
| :---: | :---: | :---: |
| Algorithm to derive BMISC | Computation | character value of VSSTRESN <br> Formal Expression［ SAS 9.0 or later as a macro call．Macro developed as a standard macro that returns a value to be assigne assignment or proc sql select and update statements．Notes：1）need to be able to specify more information about the context c version and corresponding input parameters．For ODMv1．3．2／Define－XML 2.1 free－text．2）As an example，included a version o macro name as it can be defined by the user somehwere in the metadata definition for the method to be used．］： \%convert_to_character_versionx(numeric_value=bmi_numeric_value, length=bmi_defined_lengh <br> Formal Expression［SAS 9.0 or later using a SAS Base function，asuming no restriction on length and decimal places ］： putc (bmi_numeric_value,best.) <br> Formal Expression［R version xyz，using a generic method asuming no restriction on length and decimal places ］： toString(bmi_numeric_value, witdth=NULL) |
| Algorithm to derive BMISN | Computation | round（（VSSTRESN for weight／（VSSTRESN for height／100）＾2），．01）． <br> Note：height and weight at the closest visit collected． <br> Formal Expression［ SAS 9.0 or later as a macro call．Macro developed as a standard macro that returns a value to be assign $\epsilon$ assignment or proc sql select and update statements．Notes：1）need to be able to specify more information about the context c version and corresponding input parameters．For ODMv1．3．2／Define－XML 2.1 free－text．2）As an example，included a version o macro name as it can be defined by the user somehwere in the metadata definition for the method to be used．］： <br> \％bmisn＿versionx（weight＝retrieved＿weight＿closest＿visit，height＝retrieved＿height <br> Formal Expression［ SAS 9.0 or later as a macro call．Macro developed as a standard macro that returns a value to be assign $\epsilon$ assignment or proc sql select and update statements．Notes：1）need to be able to specify more information about the context c version and corresponding input parameters．For ODMv1．3．2／Define－XML 2.1 free－text．2）As an example，included a version o macro name as it can be defined by the user somehwere in the metadata definition for the method to be used．］： <br> \％bmisn＿versiony（weight＝retrieved＿weight＿closest＿visit，height＝retrieved＿height |
| Algorithm to derive CLSIG | Computation | Only created if value qualifies as potentially clinically significant high or low based on the high and low ranges specified in the St |
| Algorithm to derive ECENDY | Computation | ECENDY＝ECENDTC－RFSTDTC＋1 if ECENDTC is on or after RFSTDTC． ECENDTC－RFSTDTC if ECENDTC precedes RFSTDTC． |
| Algorithm to derive EXDOSE | Computation | ```If ARMCD=WONDER10 then EXDOSE = Number of Tablets per Day (QVAL where QNAM=SMNO) * 10. If ARMCD=WONDER2O then EXDOSE = Number of Tablets per Day (QVAL where QNAM=SMNO) * 20. If ARMCD=PLACEBO then EXDOSE =0.``` |
| Algorithm to derive EXDOSU | Computation | Derived from ARM，ARMCD－equal to mg |
| Algorithm to derive EXENDY | Computation | EXENDY＝EXENDTC－RFSTDTC +1 if EXENDTC is on or after RFSTDTC． EXENDTC－RFSTDTC if EXENDTC precedes RFSTDTC． |
| Algorithm to derive EXSTDY | Computation | EXSTDY＝EXSTDTC - RFSTDTC +1 if EXSTDTC is on or after RFSTDTC． <br> EXSTDTC－RFSTDTC if EXSTDTC precedes RFSTDTC． |
| Algorithm to derive EXTRT | Computation | Derived from ARM，ARMCD |
| Algorithm to derive LBBLFL | Computation | Safety subjects only：LBBLFL＝＂Y＂for last record with non Null LBORRES on or before the first dose date（RFSTDTC）． Null otherwise． |
| Algorithm to derive LBDY | Computation | LBDY $=$ LBDTC－RFSTDTC +1 if LBDTC is on or after RFSTDTC．LBDTC－RFSTDTC if LBDTC precedes RFSTDTC． |
| Algorithm to derive LBNRIND | Computation | Reference Range Indicator based upon standard results and ranges． |
| Algorithm to assign RACE | Computation | Selected value converted to upper case to match CT． |
| Algorithm to derive RDOMAIN | Computation | Domain abbreviation from where data originated． |

| Algorithm <br> to derive <br> RFENDTC | Computation | RFENDTC＝termination date，for safety subjects． Null for screen failures． |
| :---: | :---: | :---: |
| Algorithm <br> to derive <br> RFSTDTC | Computation | RFSTDTC $=$ first date／time of study drug，for safety subject． Null for screen failures． |
| Algorithm to derive the SAFETY population flag | Computation | SAFETY＝＂Y＂for randomized subjects who took at least one dose study medication．Null otherwise． |
| Algorithm <br> to derive <br> SEQ | Computation | Sequential number identifying records within each USUBJID in the domain． |
| Algorithm <br> to derive <br> TSSEQ | Computation | Sequential number identifying records within each TSPARM in the domain． |
| Algorithm to derive USUBJID | Computation | Concatenation of STUDYID and SUBJID |
| Algorithm to derive VSBLFL | Computation | Safety subjects only：VSBLFL＝＂Y＂for last record with non Null VSORRES on or before the first dose date（RFSTDTC）． Null otherwise． |
| Algorithm to derive VSDY | Computation | VSDY＝VSDTC－RFSTDTC +1 if VSDTC is on or after RFSTDTC．VSDTC－RFSTDTC if VSDTC precedes RFSTDTC． |
| Algorithm to derive VSSTRESC | Computation | Data collected in non－standard units（i．e．lbs，inches）is converted using standard conversion factors to standard units（kg，cm）． |
| Algorithm to derive VSSTRESN | Computation | VSSTRESN＝numeric value of VSSTRESC，when VSSTRESC contains numeric data． |
| Algorithm to derive XSBLFL | Computation | Safety subjects only：XSBLFL＝＂Y＂for last record with non Null XSORRES on or before the first dose date（RFSTDTC）． Null otherwise． |
| Algorithm to derive XSDY | Computation | XSDY $=$ XSDTC－RFSTDTC +1 if XSDTC is on or after RFSTDTC．XSDTC－RFSTDTC if XSDTC precedes RFSTDTC． |
| Algorithm to derive XSSTRESC | Computation | Data collected in non－standard units（i．e．lbs，inches）is converted using standard conversion factors to standard units（kg， cm ）． <br> BMI is calculated by the EDC system（operationally derived）as follows： round（（XSSTRESN for weight／（XSSTRESN for height／100）＾2），．01）． <br> Note：If height is not collected at a visit，use the height collected at screening． |
| Algorithm to derive XSSTRESN | Computation | XSSTRESN＝numeric value of XSSTRESC，when XSSTRESC contains numeric data． |
| Algorithm to derive XXBLFL | Computation | Safety subjects only：XXBLFL＝＂Y＂for last record with non Null XXORRES on or before the first dose date（RFSTDTC）． Null otherwise． |
| Algorithm to derive XXDY | Computation | XXDY $=$ XXDTC－RFSTDTC +1 if XXDTC is on or after RFSTDTC．XXDTC－RFSTDTC if XXDTC precedes RFSTDTC． |
| Algorithm to derive XXSTRESC | Computation | Data collected in non－standard units（i．e．lbs，inches）is converted using standard conversion factors to standard units（kg， cm ）． <br> BMI is calculated by the EDC system（operationally derived）as follows： round（（XXSTRESN for weight／（XXSTRESN for height／100）＾2），．01）． <br> Note：If height is not collected at a visit，use the height collected at screening． |
| Algorithm <br> to derive <br> XXSTRESN | Computation | XXSTRESN＝numeric value of XXSTRESC，when XXSTRESC contains numeric data． |
