► Tasks and Utilities

A screenshot of a SAS code editor. At the top, there are tabs for 'Program 1.sas' and '\*Program 1'. Below the tabs, there are three tabs: 'CODE', 'LOG', and 'RESULTS'. The 'CODE' tab is selected. In the code editor area, there are two lines of SAS code:

```
1 proc setinit;  
2 run;
```

A large green arrow points from the highlighted 'Users' folder in the file browser to this code editor window. A green callout box contains the question: "Is there a way to hide all those folders except the one a user has access to ?"
