

Base chart with no dropbox selections and the filter set to greater than 300

Here the filter is set to greater than 100 and dropbox selections are made. The 264 is actually several counties.

With the filter set at 300 as in the chart on the right, only one bar is displayed with a total of 495 in the chart above.

So the question is can the chart change based on the data compiled instead of a hard set filter?
